

Utah Bike Maps Tips & Tricks

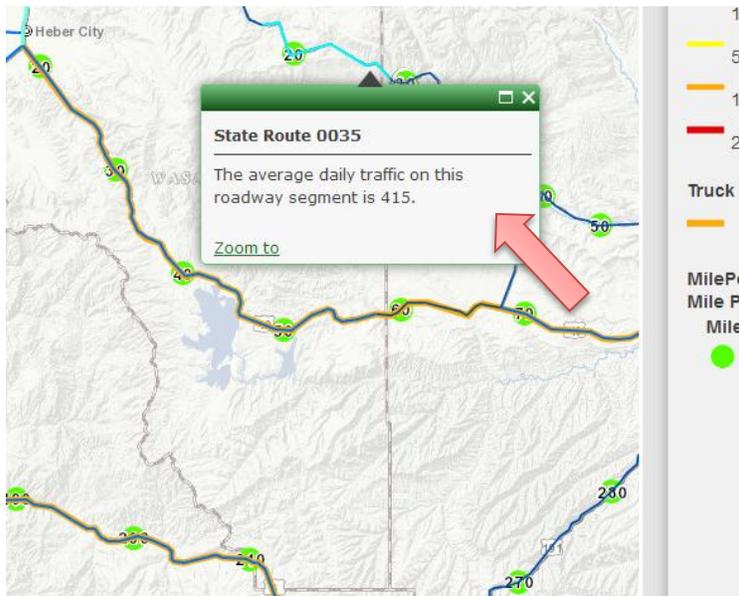

The following tips and tricks will help you utilize the map functionality and explore the many different data layers in the Utah Bike Maps to help you get useful information for your ride.

1) Navigate the Maps

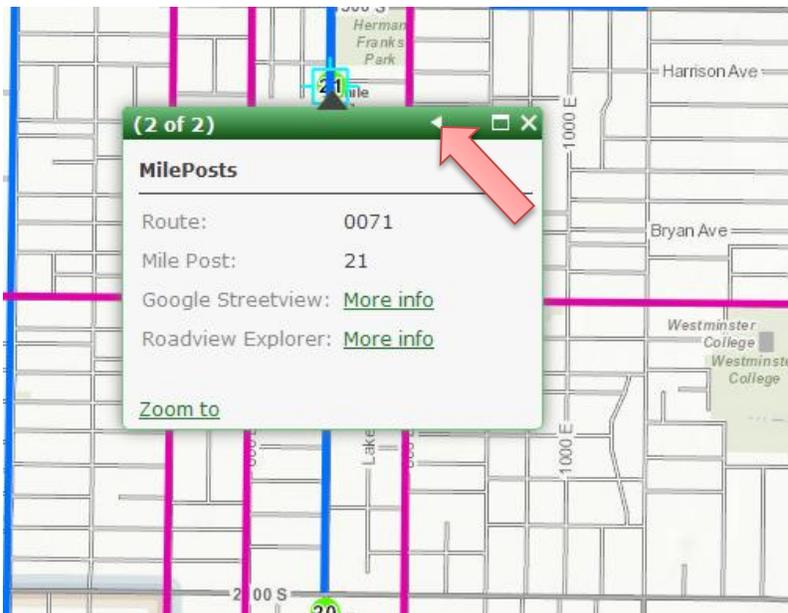

These maps are all interactive, so you can simply pan and zoom with your mouse, much like you would using any internet map, by left clicking or using your mouse wheel. You can also use the white plus and minus buttons to zoom in and out.

2) Click on the data!

By clicking on the data, you will enable the pop-up functionality in the maps. These pop-ups will provide useful information about the roadway system or data layer you are exploring.

3) Cycle through the pop-ups

Click the arrows on the pop-ups to cycle through the information. Often, there are data layers that stack on top of each other so when you see the arrows on the pop-up, there is always more information to see!
